MAS 90 Accounting Software

MAS 90 Accounting

MAS 90 is a complete business accounting program by Sage Software, Inc.

As an authorized dealer, Stellar Systems is proficient in installation, training, support, upgrades, and custom modifications for MAS 90.

MAS 90 accounting provides the flexibility to conform to the unique needs of your business (instead of the other way around).

Recommended by more CPAs than any other business management application in its class, MAS 90 offers a broad selection of feature-rich solutions.

In addition to core accounting, MAS 90 also offers comprehensive e-commerce, payroll, customer relationship management (CRM), sales force automation and financial reporting software.

This award-winning application also boasts robust manufacturing and wholesale distribution modules that help small and mid-sized businesses automate key processes, including inventory management, bill of materials and job costing.

Accounts Payable helps track expenditures by recording transactions and obligations to vendors and creditors.

A selection of payment options including automatic invoice selection and quick check entry provide great flexibility in scheduling payments.

Accounts Receivable tracks and organizes information related to your customers.

This module also gives you the data you need to run a well-organized cash management system by tracking receivables and planning your cash flow.

General Ledger is the central location where all accounting transactions are received, summarized, adjusted and balanced, yielding comprehensive financial statements.

Powerful drill-down capabilities both into G/L transactions and into subsidiary modules provide exceptional audit trails and quick answers to inquiries.

Bank Reconciliation simplifies the monthly bank reconciliation process.

This module helps you detect and locate the errors or differences between your records and the bank statements.

MAS 90 Payroll makes payroll preparation easy with over 30 reports and the ability to process earnings for multiple tax jurisdictions.

Inventory Management is the key to any successful distribution business.

Our Inventory management module provides everything you need to track the receipt and movement, sale, removal or other disposition of goods, and the precise valuation and status of your inventory.

Purchase Order organizes the important task of ordering products, and allows you to receive goods into Inventory and post invoices to Accounts Payable in one easy step.

Job Cost's powerful capabilities, including project estimating, billing, and time and materials invoicing, help you track costs and revenue down to fine detail on every project.

Sales Order gives you quick and accurate access to product availability, flexible pricing including special discounts, credit limits and much more.

You can also automatically generate invoices and print daily backorder reports.

Work Order Processing is the cornerstone of the MAS 90 and MAS 200 manufacturing solution. It lets you issue work orders, develop schedules, track costs, and maintain complete control of the manufacturing process.
